- Tempo

- Improvise a melody in that scale
- Articulation (e.g. staccatto, slurred, glissed) Play a song by ear in the scale

Major Scales

around circle of 5ths

Natural Minor Scales or "Aeolian Mode"

Starting the scale from the 6th note of a major scale results in its "relative minor" scale.

Harmonic Minor Scales (7th scale degree raised from Natural Minor)

G# Harmonic Minor

Melodic Minor Scales

(6th + 7th scale degrees raised from Natural Minor on ascending. Natural minor on descending.)

Chromatic Scales

Aside from developing familiarity with playing this scale, chromatic scales are a useful tool for developing high and low range, and maintaining a consistently great tone through a phrase crossing a wide range.

You may alter the range of this scale, or other aspects described on the first page as you see fit. If practicing to expand your range, begin by playing these scales all slurred.
